In the studio on this rainy morning, Alivia Sage, Paisley, Henry, and Quincy continued their individual studies as we glued colored tissue paper on recycled cardboard pieces. Today, squeezing the glue out of the bottles and discoveries of 'sticky' glue were main topics of discussion. "It won't come out", Quincy said. "Yes, you can do it – just squeeze with two hands", was Trisha's reply. Paisley spent a good deal of time exploring the glue with her hands, complete with the tissue paper that was stuck to her fingers! Quincy spent time peeling the dried glue from her fingers. Henry named the colors of paper he used as he put them on the cardboard surfaces.
