

### Supporting Fine Motor Control, June 5, 2012

When the children came back to the room after snack today they found a tub full of beans, caps, and shells. This provocation was set up in order to encourage the children to pick up the beans and put them into the small "bowls" provided for them. Darcy put the beans in a cup, walked carefully over to the table and then took all the beans back out of the "bowl". Adele spent over fifteen minutes picking up the beans from the tub while Mandy worked hard keeping them out of her mouth and taking photos! Henry, Nate and Cruz all put the beans into shells, caps, and a long wooden olive tray—repeating the process over and over.
