

## Legos on our Porch 8/4/2017

Using the porch as an open-ended auxiliary classroom space these first few weeks has proved an intriguing venture for new Blue Roomers. The mature material of Legos has held the spotlight there so far.

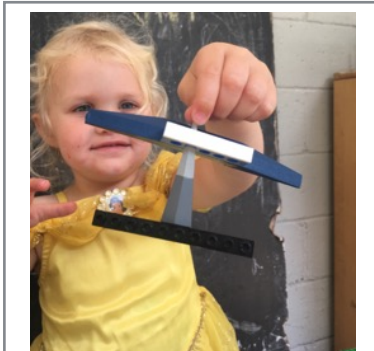

***"I just made a cool discovery!"***

Colin found a special lego piece capable of swiveling, & used it to help land Lego "rescue planes" to a movie theatre.

***"Hey! Look at my creation!"***

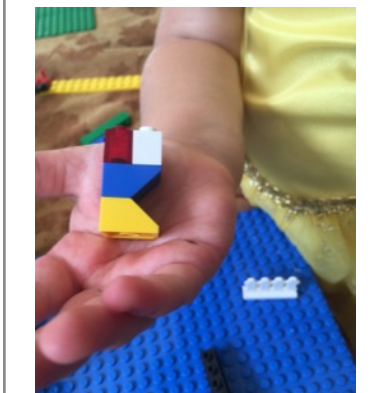

<  
***"It's an airplane. These are the wings... the jets!"***  
Huck

Ruby did not seem interested in using Lego boards & opted to create handheld pieces that were often symmetrical.

***"Look Kalei!"***  
Leo called to get my attention as he focused on creating a bridge-like structure.

>  
Margaret created a house with ***"perfect"*** size beds for two little stuffed animals from home while Julian built ***"a fix place for cars."***

While we were working a truck likely destined for the loading dock next door made a wrong turn into our parking lot. Jonah was particularly interested, & this seemed to influence his work. He identified his large board as ***"a cargo truck"*** with ***"a sun roof"*** (pictured), ***"a chimney for the big bad wolf to slide down,"*** & a lever ***"to pull to park."***
